**Abstract of JP57185720**

**PURPOSE:** To simplify the pattern change, by using a counter output as an address for read only memory (ROM) and storing a desired digital pattern in the ROM.

**CONSTITUTION:** A counter 1 counts a clock pulse CP and an output of each digit of the counter is given to an ROM2 as an address. A storage content to output a desired digital pattern is stored in the ROM2 and a desired digital pattern is obtained at terminals 01 and 02.
